Overview

Judy.ai Knowledge Base is an AI-powered document analysis platform. Upload PDF or DOCX documents and ask questions about their content using natural language. The system uses Amazon Bedrock's Retrieval-Augmented Generation (RAG) technology to provide accurate answers grounded in your uploaded documents.

Key Features

- Document upload (PDF, DOCX, up to 15 MB)
 - AI chatbot powered by Amazon Bedrock Knowledge Bases
 - Multi-session chat (create and switch between conversations)
 - File management with knowledge base ingestion status tracking
 - Chat history export as PDF
 - Content safety filtering (harmful/inappropriate queries are blocked)
-

Getting Started

System Requirements

- Modern web browser (Chrome, Firefox, Edge, Safari)
 - Internet connection
 - Valid Cognito user account (provided by your administrator)
-

Accessing the Application

Navigate to the CloudFront distribution URL provided by your administrator:

```
https://<distribution-id>.cloudfront.net
```

Login & Authentication

1. When you access the application URL, you will be automatically redirected to the Cognito login page
2. Enter your email address and password
3. If this is your first login with a temporary password, you will be prompted to set a new permanent password
4. After successful authentication, you will be redirected back to the application

Password Requirements

- Minimum 8 characters
- At least one uppercase letter
- At least one lowercase letter
- At least one number

Session Duration

- Your login session lasts 1 hour
- After 1 hour, you will be automatically redirected to the login page
- All chat sessions are cleared when the token expires

Upload Documents

1. Click Upload in the left sidebar
2. Upload files using one of these methods:
 - Drag and drop files directly onto the drop zone
 - Click Browse Files to select files from your computer
3. Supported formats: PDF, DOCX
4. Maximum file size: 15 MB
5. After upload, the file is automatically queued for processing into the Knowledge Base

Upload Status Indicators

Important Notes

- After uploading, it may take 1-2 minutes for the document to be fully ingested into the Knowledge Base

- You can check the ingestion status on the Files page
 - Once status shows "Ingested", the document is available for querying
-

Chat with Knowledge Base

1. Click Chat in the left sidebar
2. Type your question in the input field at the bottom
3. Press Enter or click the send button
4. Wait for Judy's response (a typing indicator shows while processing)

How the AI Responds

The system processes your query through three stages:

1. Safety Check - Verifies your question doesn't contain harmful content
2. Knowledge Retrieval - Searches your uploaded documents for relevant information
3. Response Formatting - Structures the answer clearly with tables, bullet points, etc.

Response Sources

- From Knowledge Base: The answer is based on your uploaded documents. Presented without disclaimers.
- From General Knowledge: If no relevant information is found in your documents, the system may use the AI's general knowledge. This is clearly indicated with: "Based on general knowledge (not from your uploaded documents):"

Multi-Session Chat

- Create new session: Click the + button in the sessions panel (right side)
- Switch sessions: Click any session in the list to view its conversation
- Session names: Sessions are named by your first message in them
- Sessions are kept during your login session and cleared on logout

Tips for Better Results

- Ask specific questions about content in your uploaded documents
 - If you get no results, try rephrasing your question
 - The system automatically rephrases and retries if the first search yields no results
 - Use clear, concise language
-

File Management

1. Click Files in the left sidebar
2. View all uploaded documents with their status

File Information Displayed

KB Status Values

Refreshing File Status

Click the Refresh button in the upper-right corner to reload the latest status from the server.

Deleting Files

1. Right-click on the file you want to delete
2. Select Delete File from the context menu
3. A confirmation dialog will appear: "Are you sure you want to delete this file "
4. Click Delete to confirm, or Cancel to abort
5. The file will be removed from S3 and the Knowledge Base will re-sync

Uploading from the Files Page

Click the Upload File button in the upper-right corner to navigate to the upload page.

Export Chat History

1. On the Chat page, click the Export button above the chat messages
 2. A PDF file will be automatically generated and downloaded
 3. The PDF contains:
 - Session name and export timestamp
 - Complete conversation history (your questions and Judy's responses)
 4. The file is named: judy-chat-<session-name>-<timestamp>.pdf
-

Logout

1. Click Logout at the bottom of the left sidebar
 2. A confirmation dialog will appear: "Are you sure you want to log out "
 3. Click Yes, Log Out to confirm
 4. All chat sessions and data are cleared from the browser
 5. You will be redirected to the Cognito logout page
-

Administration Guide

User Management

User management is performed through the AWS Management Console using Amazon Cognito.

Accessing Cognito

1. Log into the AWS Console
2. Navigate to Amazon Cognito > User pools
3. Select the user pool named rag-app-dev-user-pool (or your configured prefix)

Creating a New User

1. In the user pool, go to Users tab
2. Click Create user
3. Configure:
 - Invitation message: Send an email invitation (recommended)
 - Email address: Enter the user's email
 - Temporary password: Set a temporary password or let Cognito generate one
4. Click Create user
5. The user will receive an email with their temporary credentials
6. On first login, they will be prompted to set a permanent password

Using AWS CLI to Create Users

```
aws cognito-idp admin-create-user \
  --user-pool-id <USER_POOL_ID> \
  --username user@example.com \
  --user-attributes Name=email,Value=user@example.com Name=email_verified,Value=true \
  --temporary-password TempPass123!
```

Deleting a User

1. In the user pool, go to Users tab
2. Select the user to delete
3. Click Actions > Delete user
4. Confirm deletion

Using AWS CLI:

```
aws cognito-idp admin-delete-user \
  --user-pool-id <USER_POOL_ID> \
  --username user@example.com
```

Resetting a User's Password

```
aws cognito-idp admin-set-user-password \
  --user-pool-id <USER_POOL_ID> \
```

```
--username user@example.com \  
--password NewPassword123! \  
--permanent
```

Disabling a User (without deletion)

```
aws cognito-idp admin-disable-user \  
  --user-pool-id <USER_POOL_ID> \  
  --username user@example.com
```

Viewing User Pool ID

The User Pool ID can be found in Terraform outputs:

```
cd terraform  
terraform output cognito_user_pool_id
```

Password Policy Configuration

The current password policy requires:

- Minimum 8 characters
- At least 1 uppercase letter
- At least 1 lowercase letter
- At least 1 number
- Symbols are NOT required

To modify the password policy, update terraform/modules/cognito/main.tf and run terraform apply.

Monitoring

CloudWatch Logs

All Lambda functions write logs to CloudWatch Log Groups:

- /aws/lambda/rag-app-dev-data-upload
- /aws/lambda/rag-app-dev-data-processor
- /aws/lambda/rag-app-dev-retrieve-and-generate
- /aws/lambda/rag-app-dev-ingestion-post-processor

DLQ Alarm

A CloudWatch alarm is configured on the ingestion Dead Letter Queue. When messages land in the DLQ (indicating processing failures), the alarm transitions to ALARM state.

Knowledge Base Sync Status

Check ingestion job status:

```
aws bedrock-agent list-ingestion-jobs \  
  --knowledge-base-id <KB_ID> \  
  --data-source-id <DS_ID> \
```

```
--region us-east-1
```

Application URLs

After deployment, the key URLs are:

- Application: CloudFront distribution URL
- Login: Cognito hosted UI domain
- API: API Gateway invoke URL

All URLs are available via terraform output.
